sklearn-features provides an API to simplify feature engineering with scikit-learn and pandas.

# CHAPTER 1

## API summary

<code>transformers.DataFrameSelector(key)</code>	Transforms a DataFrame into a Series by selecting a single column by key.
<code>transformers.SeriesReshaper</code>	Transforms a Series of size N into an (N, 1) shaped numpy array.
<code>transformers.DataFrameReshaper</code>	Transforms a DataFrame of size NxM into an (N, M) shaped numpy array.
<code>transformers.NullTransformer([feature_name])</code>	Pass through the Series completely unchanged.
<code>transformers.ScalingTransformer(scaling_factor)</code>	Apply a constant scaling factor to a Series.
<code>transformers.DateAttributeTransformer(attr)</code>	Select a particular attribute from the .dt property of a Series.
<code>transformers.MultiDateTransformer(dates)</code>	
<code>transformers.LinearDateTransformer([d0, delta])</code>	Convert a datetime Series into a float Series.
<code>transformers.LabelEncoderWithUnknown([...])</code>	Convert a categorical feature into values [0, n], where [0, n) represent the known categories from the training data and n represents unknown data.
<code>transformers.OneHotWithUnknown([feature_names])</code>	
<code>transformers.OneHotWithFixedFeatures([...])</code>	
<code>transformers.series_pipeline(key, steps)</code>	
<code>transformers.dataframe_pipeline(key, steps)</code>	

## 1.1 transformers.DataFrameSelector

**class** `transformers.DataFrameSelector` (*key*)

Transforms a DataFrame into a Series by selecting a single column by key.

`__init__` (*key*)

### Methods

<code>__init__(key)</code>	
<code>fit(df[, y])</code>	
<code>fit_transform(X[, y])</code>	Fit to data, then transform it.
<code>get_params([deep])</code>	Get parameters for this estimator.
<code>set_params(**params)</code>	Set the parameters of this estimator.
<code>transform(df)</code>	

## Attributes

DEFAULT_PIPELINE_NAME
-----------------------

## 1.2 transformers.SeriesReshaper

**class** `transformers.SeriesReshaper`

Transforms a Series of size N into an (N, 1) shaped numpy array.

`__init__()`  
`x.__init__(...)` initializes x; see `help(type(x))` for signature

## Methods

<code>fit(ds[, y])</code>	
<code>fit_transform(X[, y])</code>	Fit to data, then transform it.
<code>get_feature_names()</code>	
<code>get_params([deep])</code>	Get parameters for this estimator.
<code>set_params(**params)</code>	Set the parameters of this estimator.
<code>transform(ds)</code>	

## Attributes

DEFAULT_PIPELINE_NAME
-----------------------

## 1.3 transformers.DataFrameReshaper

**class** `transformers.DataFrameReshaper`

Transforms a DataFrame of size NxM into an (N, M) shaped numpy array.

`__init__()`  
`x.__init__(...)` initializes x; see `help(type(x))` for signature

## Methods

<code>fit(df[, y])</code>	
Continued on next page	

Table 1.6 – continued from previous page

<code>fit_transform(X[, y])</code>	Fit to data, then transform it.
<code>get_feature_names()</code>	
<code>get_params([deep])</code>	Get parameters for this estimator.
<code>set_params(**params)</code>	Set the parameters of this estimator.
<code>transform(df)</code>	

### Attributes

<code>DEFAULT_PIPELINE_NAME</code>
------------------------------------

## 1.4 transformers.NullTransformer

**class** `transformers.NullTransformer` (*feature\_name=None*)

Pass through the Series completely unchanged.

`__init__` (*feature\_name=None*)

### Methods

<code>__init__([feature_name])</code>	
<code>fit(ds[, y])</code>	
<code>fit_transform(X[, y])</code>	Fit to data, then transform it.
<code>get_feature_names()</code>	
<code>get_params([deep])</code>	Get parameters for this estimator.
<code>set_params(**params)</code>	Set the parameters of this estimator.
<code>transform(ds)</code>	

### Attributes

<code>DEFAULT_PIPELINE_NAME</code>
------------------------------------

## 1.5 transformers.ScalingTransformer

**class** `transformers.ScalingTransformer` (*scaling\_factor*)

Apply a constant scaling factor to a Series.

`__init__` (*scaling\_factor*)

### Methods

<code>__init__(scaling_factor)</code>	
<code>fit(ds[, y])</code>	
Continued on next page	

Table 1.10 – continued from previous page

<code>fit_transform(X[, y])</code>	Fit to data, then transform it.
<code>get_feature_names()</code>	
<code>get_params([deep])</code>	Get parameters for this estimator.
<code>set_params(**params)</code>	Set the parameters of this estimator.
<code>transform(ds)</code>	

Attributes

<code>DEFAULT_PIPELINE_NAME</code>
------------------------------------

1.6 transformers.DateAttributeTransformer

`class transformers.DateAttributeTransformer` (*attr*)  
Select a particular attribute from the .dt property of a Series.  
<https://pandas.pydata.org/pandas-docs/stable/api.html#datetimelike-properties>  
`__init__` (*attr*)

Methods

<code>__init__</code> ( <i>attr</i> )	
<code>fit(ds[, y])</code>	
<code>fit_transform(X[, y])</code>	Fit to data, then transform it.
<code>get_feature_names()</code>	
<code>get_params([deep])</code>	Get parameters for this estimator.
<code>set_params(**params)</code>	Set the parameters of this estimator.
<code>transform(ds)</code>	

Attributes

<code>DEFAULT_PIPELINE_NAME</code>
------------------------------------

1.7 transformers.MultiDateTransformer

`class transformers.MultiDateTransformer` (*dates*)  
  
`__init__` (*dates*)

Methods

<code>__init__</code> ( <i>dates</i> )
Continued on next page

Table 1.14 – continued from previous page

<code>fit(ds[, y])</code>	
<code>fit_transform(X[, y])</code>	Fit to data, then transform it.
<code>get_feature_names()</code>	
<code>get_params([deep])</code>	Get parameters for this estimator.
<code>set_params(**params)</code>	Set the parameters of this estimator.
<code>transform(ds)</code>	

**Attributes**

---

DEFAULT\_PIPELINE\_NAME

---

## 1.8 transformers.LinearDateTransformer

**class** `transformers.LinearDateTransformer` (*d0=None, delta=Timedelta('1 days 00:00:00')*)

Convert a datetime Series into a float Series.

Perform a linear transformation based on *d0* and *delta*.

**Defaults:** *d0*: `training_ds.min()` *delta*: 1 day

`__init__` (*d0=None, delta=Timedelta('1 days 00:00:00')*)

**Methods**

<code>__init__([d0, delta])</code>	
<code>fit(ds[, y])</code>	
<code>fit_transform(X[, y])</code>	Fit to data, then transform it.
<code>get_feature_names()</code>	
<code>get_params([deep])</code>	Get parameters for this estimator.
<code>set_params(**params)</code>	Set the parameters of this estimator.
<code>transform(ds)</code>	

**Attributes**

---

DEFAULT\_PIPELINE\_NAME

---

## 1.9 transformers.LabelEncoderWithUnknown

**class** `transformers.LabelEncoderWithUnknown` (*feature\_name=None*)

Convert a categorical feature into values `[0, n]`, where `[0, n)` represent the known categories from the training data and `n` represents unknown data.

`__init__` (*feature\_name=None*)

**Methods**

<code>__init__([feature_name])</code>	
<code>fit(ds[, y])</code>	
<code>fit_transform(X[, y])</code>	Fit to data, then transform it.
<code>get_feature_names()</code>	
<code>get_params([deep])</code>	Get parameters for this estimator.
<code>set_params(**params)</code>	Set the parameters of this estimator.
<code>transform(ds)</code>	

### Attributes

DEFAULT_PIPELINE_NAME
-----------------------

## 1.10 transformers.OneHotWithUnknown

**class** `transformers.OneHotWithUnknown` (*feature\_names=None*)

`__init__` (*feature\_names=None*)

### Methods

<code>__init__([feature_names])</code>	
<code>fit(ds[, y])</code>	
<code>fit_transform(X[, y])</code>	Fit to data, then transform it.
<code>get_feature_names()</code>	
<code>get_params([deep])</code>	Get parameters for this estimator.
<code>set_params(**params)</code>	Set the parameters of this estimator.
<code>transform(ds)</code>	

### Attributes

DEFAULT_PIPELINE_NAME
-----------------------

## 1.11 transformers.OneHotWithFixedFeatures

**class** `transformers.OneHotWithFixedFeatures` (*feature\_names=None*)

`__init__` (*feature\_names=None*)

### Methods

<code>__init__([feature_names])</code>	
--	--

Continued on next page

Table 1.22 – continued from previous page

<code>fit(ds[, y])</code>	
<code>fit_transform(X[, y])</code>	Fit to data, then transform it.
<code>get_feature_names()</code>	
<code>get_params([deep])</code>	Get parameters for this estimator.
<code>set_params(**params)</code>	Set the parameters of this estimator.
<code>transform(ds)</code>	

### Attributes

<code>DEFAULT_PIPELINE_NAME</code>
------------------------------------

## 1.12 transformers.series\_pipeline

`transformers.series_pipeline` (*key, steps*)

## 1.13 transformers.dataframe\_pipeline

`transformers.dataframe_pipeline` (*key, steps*)

## CHAPTER 2

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`

## Symbols

`__init__()` (transformers.DataFrameReshaper method), 4  
`__init__()` (transformers.DataFrameSelector method), 3  
`__init__()` (transformers.DateAttributeTransformer method), 6  
`__init__()` (transformers.LabelEncoderWithUnknown method), 7  
`__init__()` (transformers.LinearDateTransformer method), 7  
`__init__()` (transformers.MultiDateTransformer method), 6  
`__init__()` (transformers.NullTransformer method), 5  
`__init__()` (transformers.OneHotWithFixedFeatures method), 8  
`__init__()` (transformers.OneHotWithUnknown method), 8  
`__init__()` (transformers.ScalingTransformer method), 5  
`__init__()` (transformers.SeriesReshaper method), 4

## D

`dataframe_pipeline()` (in module transformers), 9  
DataFrameReshaper (class in transformers), 4  
DataFrameSelector (class in transformers), 3  
DateAttributeTransformer (class in transformers), 6

## L

LabelEncoderWithUnknown (class in transformers), 7  
LinearDateTransformer (class in transformers), 7

## M

MultiDateTransformer (class in transformers), 6

## N

NullTransformer (class in transformers), 5

## O

OneHotWithFixedFeatures (class in transformers), 8  
OneHotWithUnknown (class in transformers), 8

## S

ScalingTransformer (class in transformers), 5  
`series_pipeline()` (in module transformers), 9  
SeriesReshaper (class in transformers), 4
